

Keeping your walls healthy ...

Help keep the damp at bay with a UniSeal Damp health check.

Damp is a common problem here in Cyprus. In many cases, houses both old and new are built with no damp proofing whatsoever. Before you know it, you have unsightly marks and mould on the walls, flaking paint and a cold and unappealing property.

But it is not just the home that needs to be looked after - if you are living in a home affected by damp it can seriously aggravate respiratory problems, including bronchitis and asthma, as well as encouraging the emergence of spores and mould. The effects of damp can be very serious for your home and your health.

All UniSeal Damp Proof Courses come with a 10 year guarantee, leaving you safe in the knowledge that your home will be protected for years to come.

To care for you and your home **A UniSeal Health Check** is the first step to keeping your home healthy and damp-free.

Call UniSeal now for your FREE Roof Health Check.
